PROFESSIONAL SUMMARY

portfolio positioning statement

Full Stack Developer with over a decade of experience spanning mainframe systems to modern web platforms. Core expertise is **PHP** — from WordPress and Drupal to Laravel and object-oriented architecture — combined with JavaScript, TypeScript, jQuery, React and Angular on the frontend, plus Docker, CI/CD, and multi-database integration (MySQL, Oracle, PostgreSQL).

Career began developing mainframe systems in COBOL, JCL, CICS and DB2 at **IBM** for clients including AT&T and Bank Safra — a foundation in how large-scale, mission-critical systems work. Followed by five years at **Stefanini** building portals, plugins and custom solutions for international clients including American Airlines, GSK, Edenred and Sesc.

To master object-oriented PHP, built a custom MVC framework from scratch — which today powers a full back-office operations platform designed and built solo for a Brazilian supermarket chain, complete with a Docker development environment, GitHub Actions CI/CD, RBAC, and real-time integrations with Oracle RMS and Senior ERP. Active knowledge-sharer: company-wide lectures on Docker and WordPress, and weekly English classes taught to colleagues.

TECHNICAL SKILLS

aggregated from every portfolio entry

Languages	PHP 8.2, JavaScript, TypeScript, SQL, COBOL, JCL, PowerShell, HTML5, CSS3
Frontend	React 18, Vite, React Router, Angular / AngularJS, jQuery, Bootstrap 5 / 5.3, SCSS / Sass, Axios
Databases	MySQL 8 / MariaDB, Oracle (OCI8 / PDO, RMS), DB2, SQL Server, PostgreSQL, Redis
Auth & Security	Custom RBAC, OAuth2 + PKCE, Sanctum SPA tokens, reCAPTCHA v2, honeypot / timing guards
Testing & Quality	Vitest, unit-tested pure modules, deploy verification (commit SHA + HTTP health check)
Backend	Laravel 11 / 12, Laravel Sanctum, custom PHP MVC framework, OOP, MVC, REST APIs
CMS	WordPress (custom themes & plugins, CPTs, WP AJAX, map_meta_cap, Yoast SEO), Drupal
DevOps & Infra	Docker, Docker Compose, GitHub Actions, self-hosted runners, Nginx, Apache, VPS, SFTP, SSH
Integrations	Oracle RMS, Senior ERP, CICS, external music APIs, IBGE municipality data, FluentSMTP
Other	PWA / Workbox service workers, Web Audio API, i18n (EN / PT-BR), Node.js, Agile

PORTFOLIO IN NUMBERS

quantified claims the portfolio already supports

10+ years in software	**5** professional roles	**3** live public products	**4** enterprise / internal systems
19 + 2 stores & distribution centers served	**5** concurrent DB connections in one app	**100+** daily receiving operations handled	**22** HR accounts under custom RBAC
10+ named enterprise clients	**4** talks & teaching engagements	**2** fully bilingual products shipped	**3** languages spoken

EXPERIENCE

Systems Analyst & Full-Stack Developer

2024 — Present

Rede Zeferino — Itapira, SP

Designed and built the company's back-office operations platform end to end — architecture, infrastructure, CI/CD, and features — centralizing retail workflows across 8+ supermarket stores. Built on a hand-rolled PHP MVC framework with a multi-database layer connecting MySQL and four Oracle connection scopes (RMS and Senior ERP), a data-driven RBAC system, and automated deployments via GitHub Actions with a self-hosted Windows runner.

PHP 8.2 · MySQL/MariaDB · Oracle (OCI8/PDO) · Docker · GitHub Actions · Bootstrap 5 · jQuery · SCSS · PowerShell

Full Stack Developer
2018 — 2023

Stefanini — Jaguariúna, SP

Developed PHP web applications, WordPress plugins/themes, and Drupal solutions for international clients including American Airlines, GSK, Edenred, Sesc, EDF, and Alvarez & Marsal. Migrated legacy PHP portals to Laravel. Worked in agile teams with JavaScript and jQuery.

PHP · WordPress · Laravel · Drupal · JavaScript · jQuery · Agile

Field Technician
2016 — 2018

HP / CTMM – Itaú

Managed Data Center infrastructure for one of Brazil's largest banks.

Data Center · Infrastructure · Hardware

Mainframe Systems Analyst & Developer
2014 — 2016

IBM — Hortolândia, SP

Developed and tested mission-critical systems for AT&T's billing system and Bank Safra's main system.

COBOL · JCL · CICS · DB2

Computer Technician & Private Instructor
2012 — 2014

Independent

Computer maintenance, operating systems management, and teaching basic computing skills.

Hardware · Linux · Windows · Teaching

PROJECTS — LIVE & PUBLIC

openable products

Rede Zeferino — Corporate Site & Careers Platform

★ FEATURED · LIVE IN PRODUCTION

A public corporate site that doubles as two operational tools: a store-scoped careers board where each store's HR staff manage only their own openings, and a supplier/customer contact channel routing vendor inquiries straight to the right purchasing buyer. Built on a fully custom WordPress theme with no page-builder or form-plugin dependency.

- Three-tier custom RBAC across 22 HR accounts — store-scoped "RH", store-agnostic "RH Admin", and extended Administrator caps, enforced via *map_meta_cap*, *pre_get_posts* query scoping, and admin-menu pruning
- Category-based vendor routing: submissions matched against a configurable category→buyer→email map, guarded by reCAPTCHA v2, a honeypot, and a submission-timing check
- Dynamic jobs board on a purpose-built custom post type, matching applications by city + role to the right store's contact email at submit time
- Four custom wp-admin dashboards built without any admin-page framework, with AJAX store editing and IBGE municipality data synced via a build-time fetch script
- Automated per-posting SEO metadata generation into Yoast fields, with a one-time backfill migration for existing content
- Site-wide maintenance kill switch — assigning one template to the front page instantly redirects all logged-out traffic, fully reversible, no plugin required

In production · **19 stores / 2 distribution centers** · **22 managed HR accounts** · **4 custom admin dashboards**

WordPress (custom theme) · PHP 8.2 · MySQL 8 · JavaScript/jQuery · SCSS/Sass · Bootstrap 5 · Custom Post Types · WP AJAX · Yoast SEO · reCAPTCHA v2 · FluentSMTP · Docker Compose

redezeferino.com.br — *Platform engineering by Felipe Bell Marques · UX/UI by Leonardo Gardinali*

BPAgenda — Shared Expense & Productivity Platform

LIVE · SOLO FULL-STACK

Born when Splitwise's free tier fell short: expense splitting that also handles installments, recurring bills, and ready-made monthly totals. From that expenses core it grew into a personal-organization suite — permission-gated collaborative kanban, a Super Pomodoro with preset or custom schemes, timed practice routines, and an agenda that links to all of it. In active daily use with full EN/PT-BR localization.

- Automated balance engine nets four aggregated sums (bidirectional debts + settlements) into a live per-friend balance on every read — nothing cached or denormalized, so totals stay correct after edits or deletions
- Three-mode splitting (equal / full / custom) with multi-month installments and recurring monthly expenses generated inside atomic DB transactions, plus a validator cross-checking friendship, payer/participant conflicts, and split-sum overflow before persisting
- Hand-rolled 4-tier permission ladder (owner / full / read-write / read) gating every kanban mutation at the controller layer, on Laravel Sanctum SPA token auth
- Practice routines with custom timed segments, alongside preset or custom Pomodoro schemes and agenda events that link to kanban cards and routines
- Collaborative lists with an append-only activity log reconstructing every add/remove/check by diffing item arrays on each save
- Self-hosted CI/CD — GitHub Actions deploys to a Docker/Nginx/MySQL VPS on every push to main; frontend ships as an installable PWA with a Workbox service worker for offline-aware API caching
- Self-learning categorization: a 21-category keyword-matching engine backed by a per-user "learned icon" table that remembers corrections and tracks usage

In active use | **Bilingual (EN/PT-BR)** | **5 feature modules** | **Solo full-stack**

Laravel 11 | PHP 8.2 | Laravel Sanctum | MySQL 8 | React 18 | Vite | React Router | Axios | Docker | Nginx | GitHub Actions | PWA (Workbox)

bpagenda.bell.vps-kinghost.net

BHelper — Band Management Platform

LIVE · SOLO FULL-STACK

Built to solve a real problem as a musician playing in several bands. A multi-tenant Laravel API + React SPA giving each band an isolated workspace — Kanban boards, collaborative setlists, a song catalog auto-enriched via external music APIs, and a public band site. Now used by other bands and evolving through their feedback.

- Header-verified multi-tenancy — every endpoint resolves the active band from a request header, checks it against verified membership server-side, and scopes every query; cross-band access returns 403 rather than trusting a client-supplied ID
- OAuth (PKCE) with cross-device handoff — connect a streaming account from a phone via QR code while the desktop session polls for completion, then export a setlist directly into a new playlist
- Automated metadata enrichment — new songs hydrated with BPM, key, and lyrics by orchestrating two external music APIs, with response caching to avoid redundant calls
- Real-time in-browser tuner using Web Audio sampling, autocorrelation, and parabolic interpolation for sub-cent accuracy, plus a fretboard/scale visualizer covering 30+ scale types
- CI/CD with deploy verification — GitHub Actions deploys on every push to main, verifying the deployed commit SHA and running a live HTTP health check before marking success
- Unit-tested music-theory core — pitch detection and scale/transposition isolated into pure modules with ~390 lines of Vitest coverage, decoupled from the Web Audio/DOM layer

In production | **Solo full-stack** | **9 feature areas** | **2 external API integrations**

Laravel 12 | PHP 8.2 | React 18 | Vite | Laravel Sanctum | MySQL | Redis | Docker | GitHub Actions | OAuth2 + PKCE | Web Audio API | Vitest

PROJECTS — ENTERPRISE & INTERNAL

private codebases, shown by architecture

Rede Zeferino — Back-Office Operations Platform

INTERNAL PLATFORM · NO PUBLIC ACCESS

Internal web platform for a Brazilian supermarket chain (8+ stores), centralizing retail operations: production reports, label generation, data migrations, store monitoring, and Oracle RMS / Senior ERP integrations. Built solo, end to end, on a hand-rolled PHP MVC framework.

- Multi-database abstraction layer: one app talking to local MySQL, centralized Arius MySQL, Oracle RMS (read/write), and Oracle Senior ERP
- Data-driven RBAC: permission classes with per-user overrides, a centralized access gate in the routing layer, and a dynamic sidebar rendered from a functionality catalog
- Weight management workflow (Balança CP): real-time weight recording with immediate Oracle MERGE persistence, sequential numbering, verification, and romaneio report generation — handling 100+ daily receiving operations
- Real-time store monitoring: network status of scales across 8+ stores via SSH with green/yellow/red indicators
- CI/CD: GitHub Actions with a self-hosted Windows runner and PowerShell-automated zero-downtime deployments
- Docker dev environment with Oracle Instant Client, MariaDB, Apache, and one-command startup
- Dark/light theme system (CSS custom properties + Bootstrap 5.3 data-bs-theme, localStorage persistence, OS preference detection)

8+ stores | **5 database connections** | **100+ daily operations** | **Solo full-stack + infra**

PHP 8.2 · MVC · MySQL · Oracle · OCI8/PDO · Docker · GitHub Actions · RBAC · Bootstrap 5 · jQuery · SCSS · PowerShell · SFTP

Custom PHP MVC Framework

BUILT FROM SCRATCH · IN PRODUCTION

Object-oriented PHP MVC framework built from scratch to master OOP best practices: centralized routing, autoloading, multi-database abstraction, Ajax support, and a Dockerized environment with automated port detection. Powers the Zeferino platform in production.

PHP · OOP · MVC · Docker · Docker Compose · Node.js · Sass

American Airlines Internal Portal

ENTERPRISE CLIENT

Built a complete internal portal from a clean WordPress installation connected to SQL Server. Developed all plugins and the custom theme, including a flexible page builder, admin dashboard for user group control, slides, polls, and menus.

WordPress · PHP · AngularJS · SQL Server

SourceLink Legacy Migration

LEGACY → LARAVEL

Migrated a legacy procedural PHP portal to Laravel MVC, restructuring the codebase with object-oriented principles.

PHP · Laravel · MVC · OOP

Client & Project Archive

DELIVERED ACROSS IBM & STEFANINI

Bank Safra · AT&T · GSK · Edenred · Sesc · EDF · Red Asset · AdvanSix · Alvarez & Marsal · ScalesMapApp

Enterprise portals · Plugins & themes · Mainframe systems

TALKS & TEACHING

knowledge-sharing signal

LECTURE

Docker & Docker Compose — Stefanini

Company-wide presentation for developers and testers on building automated environments with Docker.

TEACHING

English Teacher — Stefanini

Weekly one-hour sessions helping colleagues improve their English.

LECTURE

WordPress Development — Stefanini

Presentation on why WordPress remains the largest CMS and how to develop plugins and themes with PHP.

TEACHING

Computing Instructor — Independent

Taught basic computing skills privately.

KEYWORD BANK

derived — terms this portfolio can back up

Role titles: Full Stack Developer · Systems Analyst · PHP Developer · Laravel Developer · WordPress Developer · Backend Developer

High-value stack terms: PHP 8 · Laravel · WordPress Plugin Development · Custom WordPress Themes · Docker · GitHub Actions · CI/CD · Oracle Database · MySQL · React · REST API · Multi-tenancy · RBAC · OAuth2 · PWA

Differentiators most candidates lack: Hand-built MVC framework running in production · Mainframe-to-web career arc (COBOL/DB2 → Laravel) · Oracle RMS & Senior ERP integration · Self-hosted Windows GitHub Actions runner · Retail/supermarket domain expertise · Solo end-to-end delivery (architecture → infra → features)

Soft / leadership signals: Technical lecturer · Language instructor · Bilingual delivery (EN/PT-BR) · Agile teams · International enterprise clients

Named brands worth surfacing: IBM · Stefanini · American Airlines · AT&T · GSK · Edenred · Sesc · Bank Safra · Itaú · EDF · Alvarez & Marsal · HP

NOTES FOR THE REVIEWER

observations from compiling this document

→ **Store-count inconsistency:** the portfolio states "8+ stores" (experience & internal platform) but "19 stores / 2 distribution centers" (corporate site). Worth reconciling to one figure before it appears on LinkedIn.

→ **No education section** appears anywhere in the portfolio — a gap to fill on LinkedIn, which weights it in search.

→ **No certifications or formal training** are listed in the portfolio source.

→ **The résumé link on the portfolio is a placeholder** (*href*="#") — the "View Résumé" and "View Full Project Archive" CTAs currently go nowhere.

→ **Strongest under-told story:** building a custom MVC framework and then running a real multi-store retail operation on it. This is the most distinctive narrative in the portfolio and deserves top billing on LinkedIn.
